
yellow vectors: plate velocity model MORVEL-56 (Argus et al., 2011) in spreading aligned reference frame (Becker et al., 2015). Maximum velocity (back-arc spreading at −186.8E/14.8S) is ~16.5 cm/yr.
magenta triangles: holocene volcanoes from Siebert L., Simkin T. (2002): Volcanoes of the World: an Illustrated Catalog of Holocene Volcanoes and their Eruptions. Smithsonian Institution, http://www.volcano.si.edu/search_volcano.cfm.
gray circles: earthquake hypocenters with depth shallower than 50 km from the ISC-GEM 2024 catalog (doi:10.31905/D808B825).
focal mechanisms: Global CMT solutions from 1977 through July 2024 (www.globalcmt.org/CMTsearch.html; Dziewonski et al., 1981; Ekstrom et al., 2012), with depth < 50 km, Kostrov summed on a 0.5x0.5-degree grid; color indicates mean horizontal deformation.
background shading and contours: 1 arc minute topography from ETOPO2022 (MacFerrin et al., 2022). Draped contours are seafloor age in 10 Ma spacing from Seton et al. (2020).
