

EDR DAILY REPORT

Date	5/21/2017	Operator	University of Texas	Well	H005
Depth	8,161 ft	to	8,194 ft	Activity	Prepare for P&A
General Well Information					
Operator	University of Texas			Hole size	9.875
Well	H005			Bit Type	Core bit with cap
Rig name	Helix Q4000			Last casing	N/A
Location	Gulf of Mexico, USA			Mud type	WBM
Elevation RKB	52 ft			MW	10.5 ppg
Block name	Green Canyon 955			VIS	50 sec/qt
RUE number	OCS-G 30344			PV	8
Coordinates	27.000506N -90.426708W			YP	15
Prognosed TD	8440			Gel	7 15
EDR Operator : Daniel Hanson					
Daily Operations Summary					
Take well surveys, prepare for P&A procedure.					
Planned Operations for next 24 hours					
Plug well, tag cement once set to confirm plug integrity					
Data Summary for Report Interval					
Average ROP	56.94			Start Depth	8,161 ft
Average WOB	16.41			End Depth	8,194 ft
Average Torque	3.77			Feet Drilled	33 ft
Average Flow in	129.14				
EDR Report Summary					
EDR system being monitored for quality assurance. Weight on bit being zeroed as needed. Monitor depth ranges closely during coring activities. Depth at time of well start was 6706'MD with a sea floor depth of 6718'. Weatherford will monitor and log rig activities through P&A procedure and tagging top of cement to confirm plug integrity.					
Equipment Information					
Work Stations	5, Operational			Rig Sensors	Operational
Driller Terminal	1, Operational			Last Calibration	5/9/2017
Weatherford Servers	1, Operational			Maintenance check	Daily, Complete
General Comments					
Weatherford EDR system installed and operational.
